Abstract (en)

[origin: EP1074201A1] There is a C-section (130) to the right and left of the double-T-section (100). The height of the C-section corresponds to the height of the double-T-section. The double-T-section and the C-section are made from aluminum. The upper flanges (136) of the C-section grip the upper flanges of the double-T-section, and the lower flanges (138) of the C-profiles grip the lower flanges (114,116) of the double-T-section. Each upper and lower flange (110,112,114,116) of the double-T-section is formed as inner, recessed support bearing for a cylindrical roller bearing (123,124).
