Abstract (en)

[origin: EP1074276A2] The method involves filling the sprinkler pipe network with a dry inert gas, e.g. nitrogen, helium etc., from a compressed gas supply from an extinguishing valve in the feed line to the closed sprinklers, whereby the extinguishing valve feeds liquid extinguishing medium into the feed line when open. The extinguishing valve (40) is driven by a trigger valve (42) controlled by a fire alarm center (14) so that the extinguishing valve only opens the path for the liquid extinguishing medium in the feed line (10) if the gas pressure in the feed line is reduced by open sprinklers and the trigger valve is open. An Independent claim is also included for an sprinkler system.
