Abstract (en)

[origin: EP1074719A2] The method involves injecting fuel into a combustion chamber, especially. in two operating modes, whereby the effect of the operating method on the engine depends on a number of emergency running requirements. The emergency running requirements are co-ordinated and are checked for whether they can be transposed and for whether they are inconsistent. An Independent claim is also included for a control element, for an internal combustion engine and for a controller.
