Abstract (en)  
[origin: EP1074955A2] In one aspect, the present invention provides a network of game machines (506, 508, 510, 514) including a central controller (500). The central controller is useable to receive data from the game machines and also to transmit data to the game machines, for example to upload new or corrected software to the game machines. Some of the game machines may be connected to the network via radio link (512). Higher baud rates, such as 10,000 baud, are achievable with the network of the present invention. <IMAGE>
