Abstract (en)
[origin: FR2777769A1] The deep fryer has a bowl housing a removable basket, with a filter holder (7') retaining the filter (10'). A spring beneath the filter holder lifts it toward the top of the fryer when the basket is removed. When the basket is replaced it presses the filter holder down, causing the cooking oil to pass through the filter. When the basket is in place it can be locked (111,103) in position.
