Abstract (en)
[origin: WO0053454A1] The invention relates to a telescopic device for a container chassis for lengthening or shortening the chassis for transporting different sized containers, interchangeable containers and the like. A drive element is formed by a pivoting running wheel/pair of running wheels (20) that runs on the ground when the vehicle is in motion and turns a toothed wheel (24) by means of a gear driving in or out a toothed rack (24) fixed to a telescopic part (30) of the chassis (10).
