Abstract (en)
[origin: DE19909356A1] The invention relates to a material handling device having a chassis (50), a revolving superstructure (40) which is directly connected to the chassis by a pivoting crown (45), said revolving superstructure comprising an energy unit (42) and a counterweight; a working device (10) which is mounted on an equipment trestle (20) and a driver's cab (22). The equipment trestle (20) which carries the working device (10) can be fitted on the revolving superstructure (40) using an intermediate construction (30), in such a way that the working device (10) is located at a distance from the revolving superstructure (40) on the material handling device.
