Abstract (en)  
[origin: WO9958635A1] The invention relates to new bleaching and disinfecting agents which contain, in relation to the agents, (a) between 1 and 6 weight % alkali metal hypochlorites, (b) between 0.5 and 5 weight % alkylether sulfates and/or amino oxides, (c) between 0.5 and 2 weight % alkali metal hydroxides, (d) between 0.5 and 3 weight % electrolyte salts, (e) between 0.01 and 1 weight % tetrahydromyrcenol, and (f) between 0 and 4 weight % fatty acid salts, provided that the above quantities are completed to 100 weight % by the addition of water and possibly other aids and additives. These preparations have a sufficiently high viscosity as well as a very good storage stability, dispersing power for colour pigments and stability in chlorine.
