Abstract (en)
[origin: DE19818995A1] A refrigerating device (10) with a heat-insulating housing (12) which is provided with at least one storage area which is fitted with an inside lining (13) and refrigerated by means of a flat evaporator (22) that is placed in thermoconductive contact with the inside lining and is arranged in the thermal insulation of the housing. The invention is characterized in that at least sections of the evaporator (22) on the heat insulation side are provided with means (27) that prevent direct coupling between the evaporator and the heat insulating material (15).
