Abstract (en)

[origin: FR2778302A1] The invention concerns a mobile telephone designed for communicating through said cellular network (101) and comprising means matching with a wireless telephone private base (30) designed to communicate through another telephone network (100). The mobile telephone (20), thus designed to operate either in cellular mode, or in private mode as a wireless telephone handset apparatus, comprises means (1, 17) for selecting one of the two modes, cellular or private. The means for communicating through the cellular network comprising means for the telephone to be authenticated by the cellular network, the selection means are designed, when the private mode is selected, to inhibit the means for the telephone to be authenticated by the cellular network.
