Abstract (en)
[origin: EP1075809A1] A support frame for display shelving, e.g. for a shop, has a modular construction with bottom horizontal brackets (11) with front and rear floor supports (18, 20) and with a vertical pillar (10) clipped to the rear. Similar units are linked by horizontal clip-on fittings between the pillars. The pillars are slotted to take the various fittings. To prevent a partly loaded display from tipping rearwards, special stabilisers (12) are clipped to the bottom rear of each upright. The stabilisers are fitted with additional floor supports (18) and have tags that are clipped into the slots in the uprights.
