Abstract (en)
The invention relates to a lollypop display container comprised of a body having an outer surface with a series of lollypop supports and fitted inside with an opaque box having a lamp lighting a bundle of optical fiber cables. The opposite ends of each cable are lodged inside the hollow stick of a candy while the other ends of the cables are assembled into a parallel, tight, flushed and adjusted bundle by a clamp that is screwed to the interior of the opaque box. The free ends of the optical fiber cables lodged inside the candy extend above the support in such a way that the ends thereof are located close to the candy mass. The opaque box additionally has a transversal partition glass, a fan and an electrical transformer being placed inside the body of the display container. <IMAGE>
