Abstract (en)

[origin: EP1075881A2] Profiling structures (9, 10) have upper and lower plates (27-30, 34-37) arranged on a rotating axis (25, 26, 32, 33). The plates can be adjusted to produce trapezoidal profiles with different parameters to adjust upper belt width, rib width and profile height of the profile on the rotating axis across the finishing direction and together with the rotating axis vertical to the finishing direction.
