Abstract (en)

[origin: EP1075961A2] Recording material for ink jet printing with a base layer and pigment-containing layer(s) has an ink-receiving layer containing a finely-divided inorganic pigment with a particle size of 0.01-1.0 micron, the primary particles of which show an internal pore volume. An Independent claim is also included for a method for the production of ink jet recording material in which the pigment-containing ink receiving layer and the pigment-free outer layer are applied wet-in-wet.
