Abstract (en)

[origin: EP1076013A1] According to the present invention there is provided a method to obtain a good shelf life of a heat sensitive imaging element, developable by an aqueous solution by introducing a moisture regulating member in a packaging of said elements whereby the amount of water in the imaging element is reduced to a level corresponding to an equilibrium moisture content below 65.5 % R.H. at 50 DEG C.
