Abstract (en)

[origin: EP1076147A2] The device has a tilting device (8) for moving the panel between a position in contact with the frame and a position tilted wrt. the frame, a locking device for locking the panel in the frame and for releasing the locking and a drive device (14) for driving the tilting device and for driving the locking device (13). There is a coupling device for selectively connecting a single drive to the locking device and/or to the tilting device. An Independent claim is also included for a tilt and turn panel, esp. for a window or a window door .
