Abstract (en)
[origin: EP1076148A2] The lock comprises a swiveling locking element (7) in the form of a right-angled locking lever which, in its closed position, has its first end (8) gripping behind a hooking-bolt (18); the second end (10) can be brought into contact with the sliding door leaves (1,2). A drive belt (4) has a connecting piece (14) fixed to it which cooperates with the second end of the locking element. The sliding leaf has two spaced apart stops (5,6). A guide lever (19), rotarily mounted on the sliding leaf, cooperates with a deflector (3). The guide lever has a connecting link into which a bolt (13) of the locking element fits.
