Abstract (en)
[origin: FR2778733A1] The vending cabinet has shelves (8) with double walls (7a, 7b), through which a coolant fluid, especially cold air, circulated from the back to the front of the shelf. The lower wall (7b) of each shelf has orifices (15) with an evacuation rate which is higher at the front of the shelf than the back, e.g. 30 - 40 per cent at the front compared with 10 to 20 per cent at the back.
