Abstract (en)

[origin: DE19820340A1] The invention relates to a device for determining the position or size of a hole in a component, especially a car body component. The device comprises a mandrel designed to be introduced into the hole and an attachment element which can be removably connected to the mandrel. When the mandrel has been introduced into the hole the attachment element rests on the component surface surrounding the hole. The attachment element is at least partly made of a magnetic material.
