Abstract (en)
[origin: EP1077294A2] The insulation for a building wall involves a component (12) comprising heat insulating material with front and rear sides (16,18) connected by narrow sides (20-26). The rear side has at least one recess (40) accommodating a holding component (30) fixed to the building wall (10) for support of the insulating component in the adhered state to the building wall by means of mortar material. The recess runs from a narrow side (20) to the opposite narrow side via the rear side of the insulating component. One narrow side (26) is reinforced and is coated with a mortar material (44). It is provided with a plate, particularly made of plastics or mineral material.
