Abstract (en)
[origin: EP1077344A2] The light has at least one light source and at least one non-plane reflector associated with the light source. The light source has a directional radiation characteristic distributed about a central light source axis and the reflector deflects light from the source in a main beam direction. The light source (10) is arranged so that the central light source axis (14) is not parallel to the main beam direction (16).
