Abstract (en)
[origin: EP1077347A2] The headlamp has a free area reflector for generating an a symmetrical dipped beam, whereby the reflector is divided into three optically effective areas (2-4) in the vertical direction with a light source associated with the central region (5) of the middle area (3). A sharp light/dark boundary is produced for the light emanating from the light strip via the middle region of the reflector using a cover strip
