Abstract (en)  
[origin: WO9959441A1] The invention relates to a pressure-sensitive fastening part, especially for injecting the upholstered parts of motor vehicle seats with foam during production. The pressure-sensitive fastening part is provided with pressure-sensitive elements (10) on the side that is to be joined to corresponding pressure-sensitive elements of another fastening part to form a pressure-sensitive fastener. The pressure-sensitive part is also provided with connecting means (12) on the other side of said part to form a link with the respective foam material. As the connecting means (12) is made of a pressure-sensitive basic material applied to the other side of the pressure-sensitive fastening part, a type of primer layer is formed on the pressure-sensitive fastening part, whereby said primer layer forms a high-strength link with the respective foam material resulting in a strong link that is difficult to detach between the pressure-sensitive fastening part and the foamed bodies that are introduced at a later stage.
