Abstract (en)
[origin: WO9958038A1] Gripping device for gripping slightly flexible products, such as hand towels, comprising: a wall holder (1) with an insertion aperture (7); an operating mechanism (2) with an insertion aperture (22); which operating mechanism (2) connects movably to the wall holder (1); and spring means (3) which pre-tension the operating mechanism (2) in a gripping position relative to the wall holder (1), in which the operating mechanism (2) can be moved relative to the wall holder (1) against the action of the spring means (3), in such a way that in one position the insertion apertures (7, 22) at least partially correspond to each other and form a through insertion aperture into which a part of a flexible product can be inserted. The operating mechanism (2) is connected to the wall holder by way of hinge means, so that the operating mechanism can be rotated relative to the wall holder (1) against the action of the spring means (3) by manual force exerted upon the operating mechanism (2).
