Abstract (en)

[origin: WO9961024A1] Compounds which bind with high affinity to peripheral benzodiazepine receptors are useful as antiinflammatory agents. Such compounds include isoquinoline derivatives, such as PK 11195, and benzodiazepine derivatives such as Ro 5-4864. A method of treating an inflammatory condition in a mammal with such compounds is provided. Pharmaceutical compositions comprising such compounds are described. A method is provided for identifying compounds that are therapeutically effective for treating inflammatory conditions.
