Abstract (en)
[origin: WO9958474A1] The present invention provides methods for the generation of virtual libraries of compounds and using these libraries to build combinatorial libraries. The virtual compounds are generated in silico. The present invention encompasses methods for tracking the addition of fragments, use of reagents, and transformations performed. Further, methods for interfacing the information necessary to generate libraries of compounds with instrumentation that conducts the actual synthesis of the compounds are provided.
