Abstract (en)

[origin: DE19940105C1] The frame (6) is secured to the base (5) and a midfloor (4) via shock absorbing elements (8) which are pre-tensioned higher than operational forces arising without shock effect. Frame (6) and its containers (7) are connected to the base (5) and midfloor (4) by both horizontal and vertical absorbers (8). The shock absorbers consist of various types of spring and in shock automatically re-set to starting position and in so doing prevent any change in position of the caliber axis between stowage system and torpedo tubes. The axis is similarly retained unchanged under service loading.
