Abstract (en)
[origin: EP1078862A2] The lid for a transportable container has a closure system which consists of holder-hooks (21) on the lid and which engage with a groove on the container. The closure system comprises closure elements integrated with the rim of the lid (1) and movable from an open to a closed and vice versa position. Each closure element has a detachable fastening-hook (7) on the lid. The fastening hook grips from outside beneath the holder-hook or fits into it, with both parts have matching sloping parts (7b,21c). The holder-hook has at least one control-protuberance (21d) cooperating with a cam (29) with recess (29c) preferably with a sloping part on the closure element.
