Abstract (en)

[origin: EP1078874A2] The method involves acquiring the objects with a gripper hand (2) of a robot (1) and transporting them to the unloading station in the gripper hand. The stack is picked up by the gripper hand near the stacking device (4), held clamped by the hand and folded at least once before the folded stack is deposited in the unloading station after releasing the clamp. An Independent claim is also included for an arrangement for transporting stacked flat plastic foil objects, especially pockets or similar.
