Abstract (en)
[origin: EP1079038A2] Exhibition structure comprises structural elements such as bars, supports, etc. with at least one element (40) such as a wall or floor element arranged in between. Hooks (24, 24A) are arranged on the structure which bend when one such element is inserted via components which are essentially complementary to the hooks. The hooks then grip the components to hold the element on the structure. This element has a recess near to the position of a hook in the assembled state which allows the insertion (B, B') of a tool to bend the hook to release the hook connection.
