Abstract (en)

[origin: EP1079049A2] The cap-shaped cover element (60) is adjustable between an open and a cover position. In a covering position, the cover element covers the closing cylinder (10) from outside; and in the open position it releases the key-hole of the closing cylinder. The track along which the cover element travels is fixed by guide pieces comprising a swivel lever (70) movably mounted on the cover element and housing (50).
