Abstract (en)
[origin: EP1079052A1] The lock cylinder has a rotatable core (2) in a housing (1), a lock channel in the core for inserting a key with a transponder (12), an electronic blocking mechanism for selective making or release of a shape-locking joint between the core and housing and a code receiver (10, 11) for receiving the transponder signal. The core has an outer sleeve-shaped part (21, 22) transmissive for the transponder signal and the code receiver is fixed to the housing radially opposite the outer core part to receive the transponder signal.
