Abstract (en)

[origin: EP1079180A2] A door for an apparatus e.g. oven has: (a) a number M of at least three retaining devices (74) to hold one door pane each; and (b) a number n of at least two but not more than m door planes. The door panes have different geometric dimensions. Each of them can be installed in only one of the m retaining devices and taken out of this again. Each installed door pane is held in the assigned retaining device independently of the presence of a further installed door pane. The door panes can be installed only in a specified sequence one after another in the assigned retaining devices and taken out again in the reverse sequence.
