Abstract (en)  
[origin: EP1079292A1] The system includes a first connection (3) to the gas bottle (1), a second connection (11) to a second bottle (12) and a third connection (6) to the consumer. The first connection is joined to the pressure regulator (5) by a three-way coupling (4) plus a valve (9) permitting one way flow only and a medium pressure regulator (10) is positioned between the free coupling end and the second connection (11). This regulator (10) only permits flow to the element (4) and this only at reduced flow pressure over the valve (9). The operating regulator (5), three-way element (4) and valve (9) should form a single assembly group and an indicator (7) displays pressure between first connection (3), valve (9) and regulator (5), using a pressure-responsive signaller (8) to warn of impermissible pressure fall.
