Abstract (en)

[origin: EP1079342A2] An electric power generator (10) delivers power over a transmission network (12) as an energy carrier to a distributed network operator (14) who passes this power on over a distributed network (16) to end-users (18) through a main meter or a supplementary meter (20) connected locally or in the end-user's house to a standard electric installation by means of a wire (22) that crosses a property boundary (24) between distributed network operators and end-users.
