Abstract (en)
[origin: EP1079350A1] A device has an image sensor (5), one or more presence or movement sensors (6) and an electronic controller-analyzer coupled to these sensors. Devices for detecting sabotage to any sensor store and check stable features for images picked up by the image sensor. Checking stable features is performed by testing an image of a room being monitored for stable features. Any stable features found are compared with stored images by using image-processing methods.
