Abstract (en)
[origin: EP1079479A1] Two cables (3,4) of a double crimp cable (25) are separated into two by a foldable separating flap (24) connected to a pivot arm (21). The flap can be releasably engaged with a guide and separating part (28), which is arranged in a cable storage tray (26) that can be emptied by lateral tilting. The cable guide and separating part (28) can be brought into engagement with second cable guide and separating part (29) to transfer the double crimp cable when the cable tray is in the emptying position.
