Abstract (en)
[origin: WO9958067A1] The invention relates to a device for preparing a human tubular bone for implantation of a bone implant. Said device comprises a programmable industrial robot (2) which on its hand (3) carries a machine tool (4) which has a tool head (5) and works like a hammer drill. When the machine tool (4) is operating the tool head carries out an oscillating stroke movement in the direction of its longitudinal axis and carries a bone rasp (6) by means of which a hollow space having the shape of the bone implant to be inserted is created in the tubular bone (7).
