Abstract (en)
[origin: WO9961115A1] A hockey stick comprises an elongate handle region (10) merging at its lower end with an elongate shaft region (12) which merges at its lower end with a head region (16). The shaft region (12) and/or the head region (16) incorporate an extended playing section (14) disposed such that, in open stick use, when the outer edge of the head region (16) and/or the extended playing section in the region of the merger thereof is in contact with the ground, and the axis of the extended playing section (14) is generally parallel to the ground, the free end of the handle region (10) is spaced off the ground by at least 2 cm.
