Abstract (en)
[origin: WO9961688A1] Dirt is initially removed by means of blown air (RD) in a fibre-processing machine (30) that is provided with a separating edge (24). Fibres and air are conducted in a substantially predetermined direction of conveyance on said edge and a layer of air that is loaded with dirt particles or refuse is deflected from the fibre/air flow (10) by means of the separating edge.
