Abstract (en)
[origin: WO9960229A1] A method of using a device, and device for use in the construction industry comprising, a continuous casing unit (8) with at least two spaced kicker units embedded therein. Each of the kicker units are selectively manoeuvrable with respect to the casing unit (8), so that, in a first position said kicker units are parallel to the surface of the casing unit (8) and in use, are manipulated so as to be perpendicular to the casing unit (8) surface. The kicker unit comprises a base portion (7) and associated therewith a defining means which can be adjusted in length so as to define the boundary width of a wall cavity.
