Abstract (en)
[origin: DE19823731A1] The invention relates to a remote control device for motor vehicles (1), comprising a transmitter (4) for a wireless transmitted enabling signal, which is activated only when the user has been recognized as an authorized user and which has an identification device (7) recognizing said authorization and which is assembled in one single constructional unit along with the transmitter. The identification device records personal and individual characteristics of the user.
