Abstract (en)

[origin: WO9960310A1] The invention concerns a heating device with metal storage radiator comprising two storage means. Said heating device by radiator storage is of the type using a radiator (1) consisting of a cast aluminium block formed by several elements (2, 3, 4, 5, 6 and 7) with fins through which circulates a heat transferring fluid. The invention is characterised in that the heating unit is provided with a reserve for receiving a refractory block (14) which is itself equipped with an electrical resistance powered by the mains supply, a safety thermostat (16) is placed in the radiator (1) upper part linked to an interrupter air sensing thermostat (17) acting as regulator. The invention is useful for heating premises.
