Abstract (en)

[origin: FR2778995A1] Procedure consists of selection of one or more areas of interest, memorization of the area of interest, emission of a code assigned to the interest sector, or receipt of a code representative of an interest sector, and movement of a first device so that it is sufficiently close to other devices to send or receive the appropriate codes. The discovery also concerns a standard for emission and receipt of codes emitted by a second device. An Independent claim is made for apparatus for carrying out the procedure for emission and receipt of appropriate codes and data. The equipment consists of a mobile device with associated input and output apparatus that can communicate with fixed devices that exchange information in an interactive manner through a transmission space.
