Abstract (en)

[origin: WO9962199A1] There is provided a receiver, and method for using such a receiver, the receiver having a first input for receiving a first signal, a first processing path coupled to the first input for processing said first signal, a second input for receiving a second signal at a second different frequency and a second processing path coupled to said second input for processing said second signal. Each of the first and second paths have means for changing the frequency of the first and second signal to different frequencies, wherein the first and second signals are changed to different frequencies and the first and second inputs are arranged to receive the first and second signals at the same time.
