Abstract (en)
[origin: EP1080750A2] A carriage (2) is movably guided in the snowboard's lengthwise direction. The angle of the binding to the snowboard's lengthwise direction (L) is adjustable by means of an angle adjustment disc (1) pivot mounted on the carriage and fixed to the binding. A guide plate (5) is fixed to the snowboard and has detents (14) along it. A locking member operated by a control is mounted on the carriage and fits into the detents. The periphery of the angle adjustment disc has detents into which grips a further control-operated locking member mounted on the carriage.
