Abstract (en)

[origin: EP1080885A1] The rotatable cylinder fabric (4) during its patterning process is stretched between end rings (2, 3) and is supported from inside by means of a roll (21) - which extends virtually over the entire length of the cylinder screen against the external patterning head (23). An Independent claim is also included for an apparatus for implementation of the proposed method. It comprises means for rotating and fixing in required angular positions the cylinder fabric, and supporting it from inside during the patterning process.
