Abstract (en)

[origin: EP1081061A2] A flexible container (1) for liquid transport made of a flexible material includes a top face portion (11), a bottom face portion (12), and a peripheral face portion (13) connecting the top face portion (11) and the bottom face portion (12). An air tight, water resistant slide fastener (20) is openably/closably mounted to the peripheral face portion (13) of the container (1). A liquid stirring port (14) is provided at the top face portion (11), and a liquid injecting and ejecting port (15) are provided at a lower end of a rear face portion (13d) of the peripheral face portion (13). Container suspending pieces (10a) and bottom face portion fixing pieces (10b) are mounted at the top face portion (11) of the container (1) and at four corners of the bottom face portion (12). During washing, the container (1) can be washed reliably and efficiently while the inside of the spread out container can be visually checked by efficiently utilizing the air tight, water resistant slide fastener (20), liquid stirring port (14), liquid injecting and ejecting port (15), and container suspending pieces (10a), and bottom face port fixing pieces (10b). <IMAGE>
