Abstract (en)

[origin: EP1081324A2] The device has an electrical component fixed to the panel, e.g. an electromagnetic actuator or electromagnet with an electricity supply device for the component mounted at least partly near a force transfer rod (16a) fixed on one side and attached to the panel on the other. The electricity supply device has two leads connected to first and second external supply terminals (28,30). The first lead is formed on or in the rod and the second lead is formed on or in the rod or on a separate lead device (16b).
