Abstract (en)  
[origin: DE19941409C1] The screw cleaner (4) has at least 2 relatively offset cleaning elements (6,7) for cooperating with the gap between adjacent turns of the helical screw thread (3) of the drilling tool (1), supported by a common holder (19), which is pivoted to a mast guide (5), mounted on a mast of the drilling device. A drive unit (25), e.g. a piston-cylinder device, pivots the cleaning elements into and out of engagement with the helical screw thread, with at least one cleaning element being longitudinally adjustable relative to the holder.
